# MOBILE APPLICATION DEVELOPMENT USING J2ME

## Introduction to J2ME

### What is J2ME

J2me is a software or specification for developing small computing devices

Or

J2me is a Java platform designed for Small Computing Devices ranging from pagers, mobile phones, Personal Digital Assistance (PDA) to the set up boxes.

- J2ME provides a robust, flexible environment for applications running on mobile and other embedded devices such as mobile phones, personal digital assistants (PDAs), TV set-top boxes, and printers.
- J2ME includes flexible user interfaces, robust, security, built-in network protocols, and support for networked and offline applications that can be downloaded dynamically.
- Applications based on J2ME are portable across many devices, yet leverage each device's native capabilities.

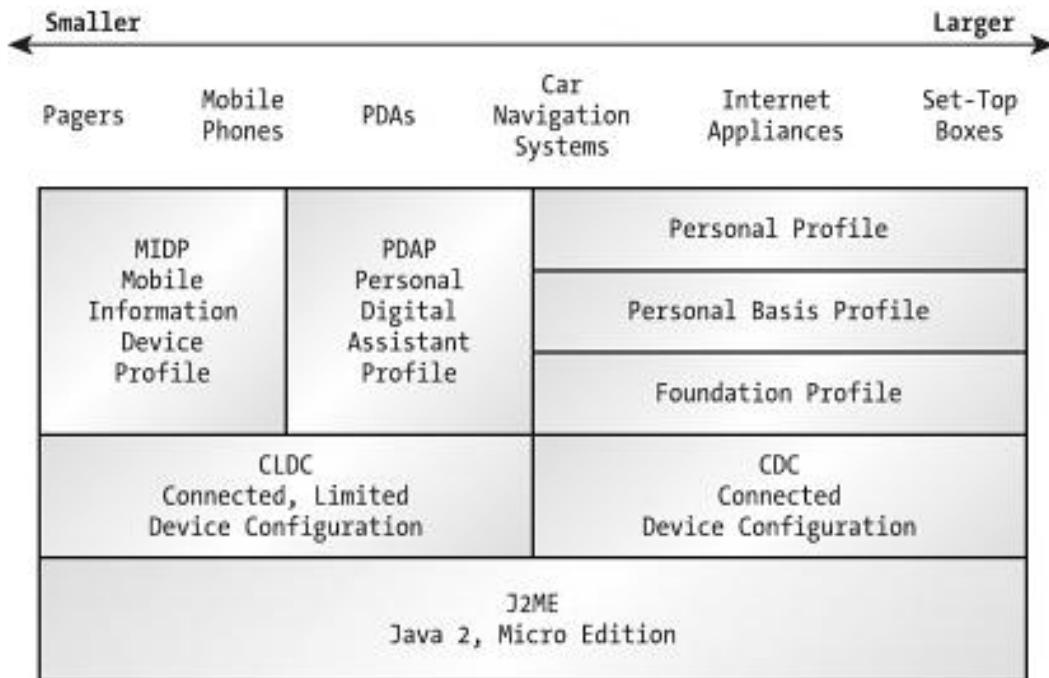

### J2ME is divided into

- Configurations

# MOBILE APPLICATION DEVELOPMENT NOTES

---

- Profiles &
- Optional API's

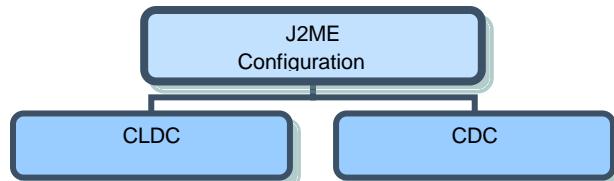

## J2ME Configuration :

- A configuration is a complete Java runtime environment, consisting of:
  - Java virtual machine (VM) to execute Java bytecode
  - Native code to interface to the underlying system
  - Set of core Java runtime classes

currently J2ME supports two standard configurations:

- Connected Limited Device Configuration (CLDC)
- Connected Device Configuration (CDC)

# MOBILE APPLICATION DEVELOPMENT NOTES

---

- **CDC**
  - Full Java implementation
  - 32 bit
  - Device must have  $\geq$  2MB memory
- **CLDC**
  - Subset of Java
  - 16 or 32 bit
  - Device with 160 – 512 kb memory
- **3 sizes of Virtual Machines are specified**
  - 1MB – 10MB Classic VM (**CVM**)
  - 10kb – 500kb Kilo VM (**kVM**)
  - 8bit Card VM

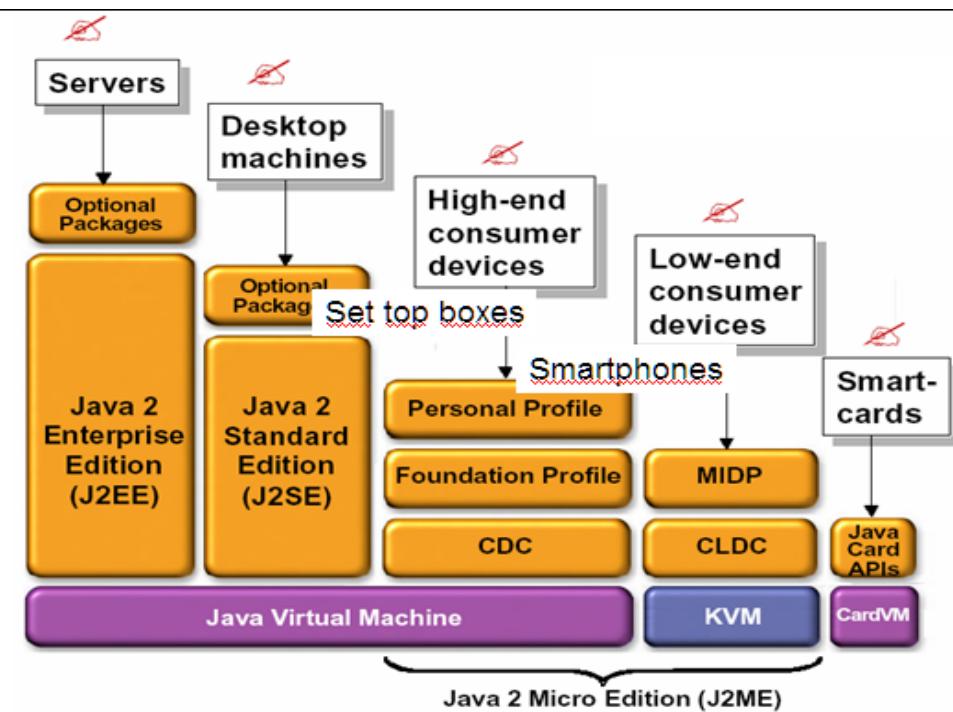

## J2ME Profiles :

- A profile complements a configuration by adding additional classes that provide features appropriate to a particular type of device or to a specific vertical market segment. Both J2ME configurations have one or more associated profiles, some of which may themselves rely on other profiles.
  - It Guarantees interoperability within device verticals
  - Industry groups specify profiles for each of the configurations (Nokia, AOL, Palm, Oracle, etc)

## The Profiles supported by J2ME are

- MIDP Mobile Information Device Profile
- Foundation Profile (non gui networked device)
- Personal basis, Personal and RMI Profiles
- Game Profile

# MOBILE APPLICATION DEVELOPMENT NOTES

## Mobile Information Device Profile (MIDP)

This profile Addresses

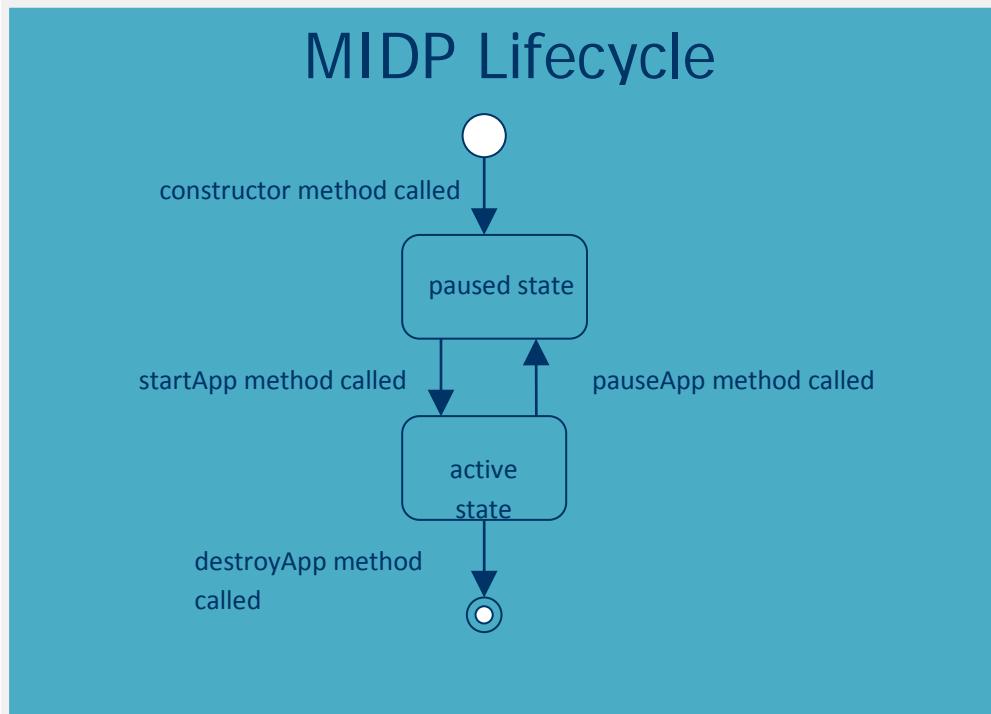

- Persistence
- Networking
- Application life-cycle management
- Event handling
- Hardware characteristics
  - Screen size 96 x 54
  - Touch screen and/or ½ handed key input
  - 128k non-volatile memory plus 8k for persistence, 32k for Java Runtime
  - Support for 2-way wireless networking

# MOBILE APPLICATION DEVELOPMENT NOTES

---

## MIDP Applications are called MIDlets

- MIDP device contains a program called the **Application Management Software** (AMS) which downloads the MIDlet suite from the server, opens the MIDlet suite, then launches the user-specified MIDlet on the MIDP device
- High level API's
  - Textfields, lists, forms and images for programs such as e-commerce applications & basic user interfaces
- Low level API's
  - Incorporate graphics & shapes at precise pixel locations, provides animation for games applications

## PDA Profile (PDAP)

# MOBILE APPLICATION DEVELOPMENT NOTES

---

The PDA Profile is similar to MIDP, but it is aimed at PDAs that have better screens and more memory than cell phones.

## *Foundation Profile*

The Foundation Profile extends the CDC to include almost all of the core Java 2 Version 1.3 core libraries. As its name suggests, it is intended to be used as the basis for most of the other CDC profiles.

## *Personal Basis and Personal Profiles*

The Personal Basis Profile adds basic user interface functionality to the Foundation Profile. It is intended to be used on devices that have an unsophisticated user interface capability, and it therefore does not allow more than one window to be active at any time. Platforms that can support a more complex user interface will use the Personal Profile instead.

## *RMI Profile*

The RMI Profile adds the J2SE Remote Method Invocation libraries to the Foundation Profile. Only the client side of this API is supported.

**Game Profile** This will provide a platform for writing games software on CDC devices.

## **MOBILE APPLICATIONS DEVELOPMENT**

### **LAB MANUAL**

## MOBILE APPLICATION DEVELOPMENT NOTES

---

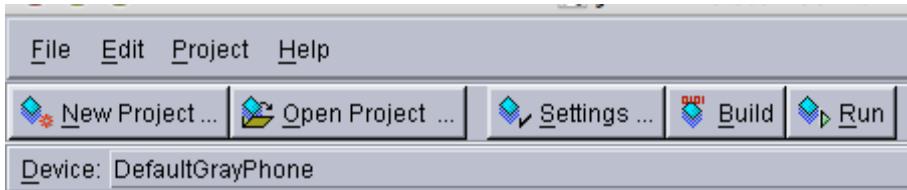

S.NO	DESCRIPTION OF THE PROGRAM
1	Write programs to implement HelloWorld midlet
2	Write programs to implement multiple midlets
3	Write programs to implement command class
4	Write programs to implement check color
5	Write programs to implement MenuCreation
6	Create a MIDP application,which draws a bargraph to display.Data values can be given integer
7	Create a MIDP application which Examine ,that a phone number,which a user entered in given format.
8	Create a MIDP Application,which draws a Pie Graph to the display.Data Values can be given at int[] array.You can enter four data(integer)values to the input text field.
9	Write a program for quiz midlet
10	Create a slideshow which has three slides.which includes only text.Program should change to the newslide after 5 seconds.After the third slide program returns to the First Slide
11	Create a slideshow which has three slides,which includes pictures at PNG format.Program should change to the new slide other 5 seconds.
12	Write program for creating datagram
13	Write program for creating login file

# MOBILE APPLICATION DEVELOPMENT NOTES

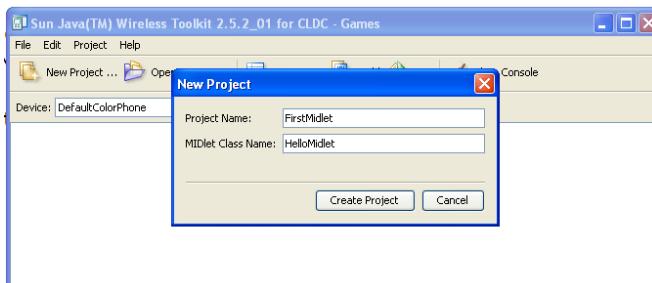

---

## Prg-1:-Printing HelloWorld program

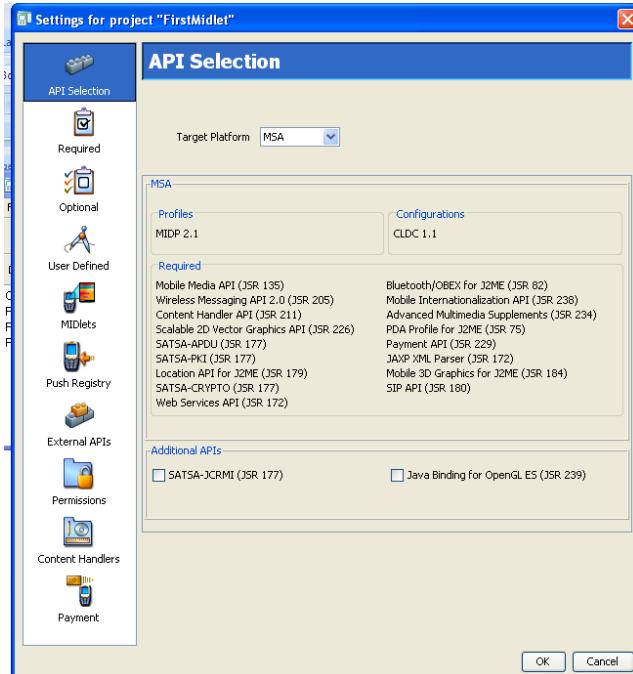

**Step-1:**-Start ->AllPrograms->Sun Java Tool Kit->Wireless Tool Kit

**Step-2:**-Click New Project –Enter project Name as FirstMidlet -> Enter ClassName as HelloMidlet->click on Create Project

**Step-3:**- A setting window will open up. Accept the defaults by clicking ok in that window.

## MOBILE APPLICATION DEVELOPMENT NOTES

---

**Step-4:-**Write Following Code in Notepad and save it as HelloMidlet.java

```
import javax.microedition.midlet.*;
import javax.microedition.lcdui.*;
public class HelloMidlet extends MIDlet {
public HelloMidlet() {
}
public void startApp() {
Form form = new Form( "First Program" );
form.append( "Hello World" );
Display.getDisplay(this).setCurrent( form );
}
public void pauseApp() {
}
public void destroyApp( boolean unconditional ) {
}
}
```

**Step-5:-**Place HelloMidlet.java in C:\Documents and settings\ADMIN\j2mewtk\2.5.2\apps\FirstMidlet\src\

**Step-6 :**In the ktoolbar main window click on the “Build” button. When the build compiles successfully then click on the “Run” button.

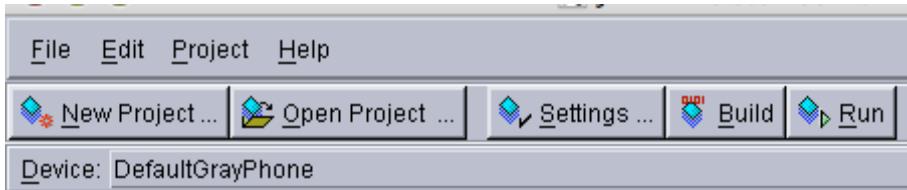

# MOBILE APPLICATION DEVELOPMENT NOTES

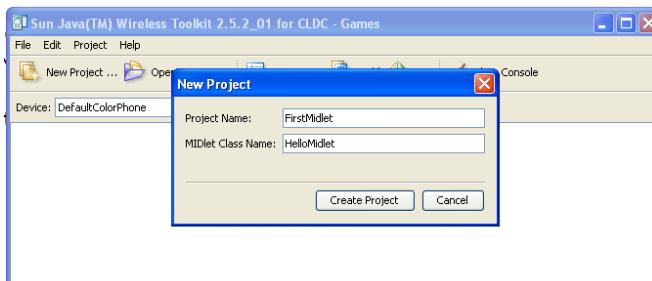

---

## Program 2: creating multiple midlets in single project

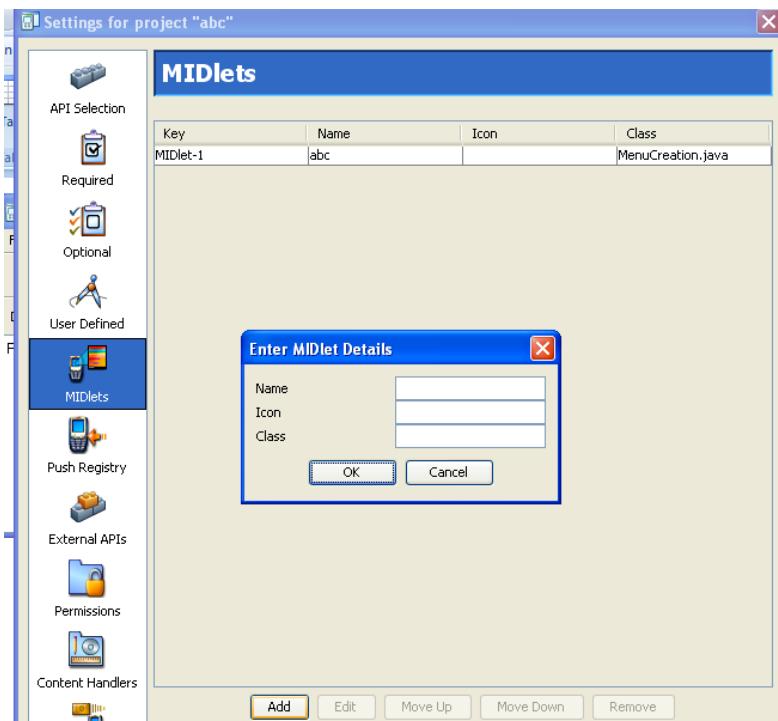

Step-1:-Start ->AllPrograms->Sun Java Tool Kit->Wireless Tool Kit

Step-2:-Click New Project –Enter project Name as FirstMidlet -> Enter ClassName as HelloMidlet->click on Create Project

Step 3: click settings button and select midlet- >add give midlet name , class name

## MOBILE APPLICATION DEVELOPMENT NOTES

---

**Step 4:** write a following code in source folder

Midlet 1:

```
import javax.microedition.midlet.*;
import javax.microedition.lcdui.*;
public class HelloMidlet extends MIDlet {
    public ByeMidlet() {
    }
    public void startApp() {
        Form form = new Form( "First Program" );
        form.append( "Hello World" );
        Display.getDisplay(this).setCurrent( form );
    }
    public void pauseApp() {
    }
    public void destroyApp( boolean unconditional ) {
    }
}
```

**Step 5:** write a following code with different class name in source folder

Midlet 2:

```
import javax.microedition.midlet.*;
import javax.microedition.lcdui.*;
public class HelloMidlet extends MIDlet {
```

# MOBILE APPLICATION DEVELOPMENT NOTES

---

```
public HelloMidlet() {  
}  
  
public void startApp() {  
    Form form = new Form( "First Program" );  
    form.append( "good bye" );  
    Display.getDisplay(this).setCurrent( form );  
}  
  
public void pauseApp() {  
}  
  
public void destroyApp( boolean unconditional ) {  
}  
}
```

**Step 6:** click BUILD button

**Step 7:** if build successfully completed then click RUN button

# MOBILE APPLICATION DEVELOPMENT NOTES

---

**Program 3: write a program for implementing command class**

**Step 1,2,3 same as above program**

**Step 4:** write down the following code in the source folder

```
import javax.microedition.midlet.*;
import javax.microedition.lcdui.*;
public class OnlineHelp extends MIDlet implements CommandListener
{
    private Display dis;
    private Command back;
    private Command exit;
    private Command help;
    private Form form;
    private TextBox hm;
    public OnlineHelp()
    {
        dis=Display.getDisplay(this);
        back=new Command("BACK",Command.BACK,2);
        exit=new Command("EXIT",Command.EXIT,1);
        help=new Command("HELP",Command.HELP,3);
        form=new Form("online help");
        hm=new TextBox("online help","press back to return to the previous screen or press
exit to close this program",81,0);
        hm.addCommand(back);
```

## MOBILE APPLICATION DEVELOPMENT NOTES

---

```
form.addCommand(help);
form.addCommand(exit);
form.setCommandListener(this);
hm.setCommandListener(this);
}

public void startApp()
{
    dis.setCurrent(form);
}

public void pauseApp()
{
}

public void destroyApp(boolean unconditional)
{
}

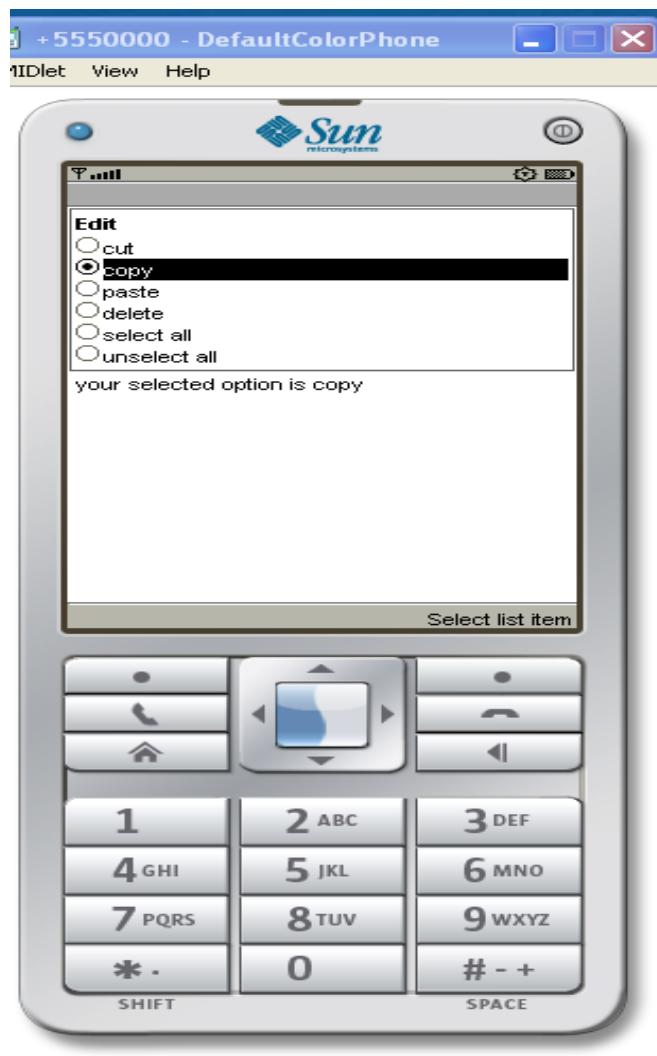

public void commandAction(Command c , Displayable d)
{
    if(c==back)
    {
        dis.setCurrent(form);
    }
}
```

## MOBILE APPLICATION DEVELOPMENT NOTES

---

```
else if(c==exit)
{
destroyApp(false);
notifyDestroyed();
}

else if(c==help)
{dis.setCurrent(hm);
```

```
}}}
```

**Step 5:** click BUILD button

**Step 6:** if build successfully completed then click RUN button

## MOBILE APPLICATION DEVELOPMENT NOTES

---

**Program 4: write a program for check color**

**Step 1,2,3 same as above program**

**Step 4:** write the following code in the source folder

```
package greeting;

import javax.microedition.midlet.*;
import javax.microedition.lcdui.*;

public class Checkcolor123 extends MIDlet implements CommandListener

{
    private Display display;
    private Form form;
    private TextBox textbox;
    private Command exit;
    public Checkcolor123()
    {
        display=Display.getDisplay(this);
        exit=new Command("Exit",Command.SCREEN,1);
        String message=null;
        if(display.isColor())
        {
            message="Color display";
        }
        else
```

## MOBILE APPLICATION DEVELOPMENT NOTES

---

```
{  
    message="No color display";  
}  
  
textbox=new TextBox("Check Colors",message,17,0);  
  
textbox.addCommand(exit);  
  
textbox.setCommandListener(this);  
}  
  
public void startApp()  
{  
    display.setCurrent(textbox);  
}  
  
public void pauseApp()  
{  
}  
  
public void destroyApp(boolean unconditional)  
{  
}  
  
public void commandAction(Command command,Displayable diasplayable)  
{  
    if(command==exit)  
    {  
        destroyApp(true);  
    }  
}
```

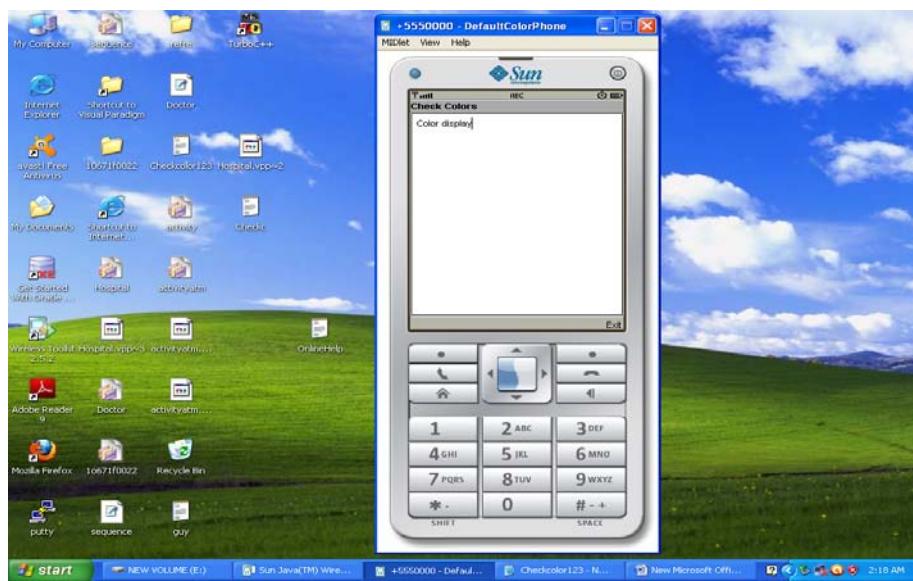

# MOBILE APPLICATION DEVELOPMENT NOTES

---

```
    notifyDestroyed();  
}  
}  
}
```

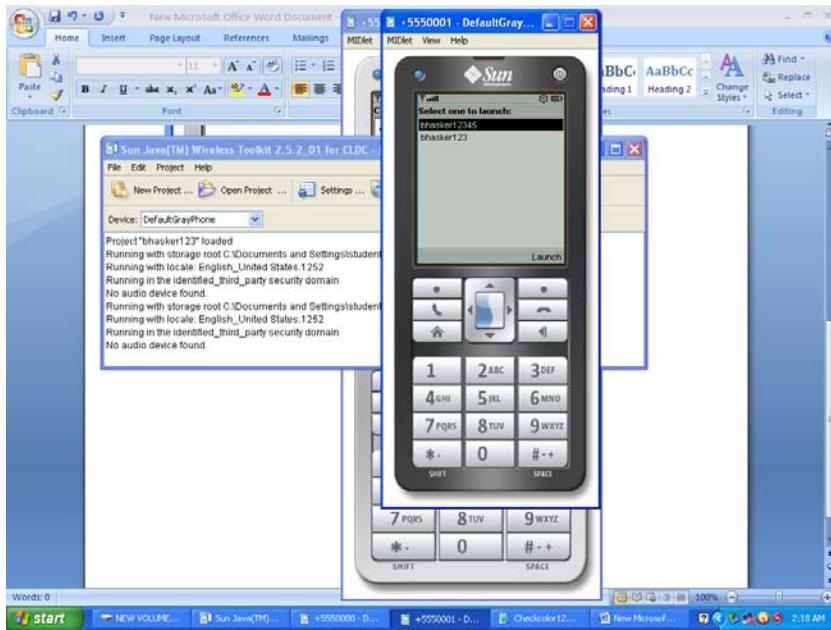

**Step 5:** click BUILD button

**Step 6:** if build successfully completed then click RUN button

# MOBILE APPLICATION DEVELOPMENT NOTES

---

## Program 5: program for creating menu events

**Step 1,2,3 same as above program**

**Step 4:** write the following code in the source folder

```
import javax.microedition.midlet.*;
import javax.microedition.lcdui.*;
```

```
/**
 * @author ADMIN
 */
public class MenuEvents extends MIDlet implements
CommandListener,ItemStateListener {
```

```
    public ChoiceGroup ch;
    public ChoiceGroup ch1;
```

## MOBILE APPLICATION DEVELOPMENT NOTES

---

```
public Form form;  
public Form form1;  
public Display display;

Step 5: following code for datagram client placed source folder

```
/*  
 * To change this template, choose Tools | Templates  
 * and open the template in the editor.  
 */
```

```
import javax.microedition.midlet.*;  
import javax.microedition.lcdui.*;  
import javax.microedition.io.*;  
  
/**  
 * @author ADMIN  
 */  
  
public class DatagramClient extends MIDlet implements CommandListener{  
  
    public Form form1;  
  
    public Display display;  
  
    public TextField textfield;  
  
    public Command sendCommand;  
  
    public DatagramClient()  
}
```

## MOBILE APPLICATION DEVELOPMENT NOTES

---

```
{  
    display=Display.getDisplay(this);  
  
    form1=new Form("Datagram Client");  
  
    sendCommand=new Command("send",Command.OK,1);  
  
    textfield=new TextField("Enter Text",null,30,TextField.ANY);  
  
    form1.append(textfield);  
  
    form1.addCommand(sendCommand);  
  
    form1.setCommandListener(this);  
  
}  
  
public void startApp() {  
  
    display.setCurrent(form1);  
  
}  
  
public void pauseApp() {  
  
}  
  
public void destroyApp(boolean unconditional) {  
  
}  
  
public void commandAction(Command cmd,Displayable d)  
{  
  
    if(cmd==sendCommand)  
  
    {  
  
}
```

## MOBILE APPLICATION DEVELOPMENT NOTES

---

```
try      {  
  
    DatagramConnection dgc = (DatagramConnection)  
        Connector.open("datagram://localhost:9001");  
  
    try {  
  
        while(true)  
        {  
  
            byte[] payload = textfield.getString().getBytes();  
  
            Datagram datagram = dgc.newDatagram(payload, payload.length);  
  
            dgc.send(datagram);  
  
        }  
  
    } finally {  
  
        dgc.close();  
  
    }  
  
} catch (Exception x) {  
  
    x.printStackTrace();  
  
} } }  
}  
  
Step 6: click build  
  
Step 7: click run
```

## MOBILE APPLICATION DEVELOPMENT NOTES

---

Program 13: **program for creating login file**

Step 1,2 3 same as above program

Step 4: write the following code in source folder

<%--

Document : index

Created on : Aug 17, 2011, 1:35:46 PM

Author : MCA

--%>

<%@page import="java.sql.\*" %>

<%

String Htno=request.getParameter("t1");

String Sname=request.getParameter("t2");

String sql="select \* from stu where sno='"+Htno+"' and sname='"+Sname+"'";

try

{

Class.forName("com.mysql.jdbc.Driver");

Connection

cn=DriverManager.getConnection("jdbc:mysql://localhost:3306/std","root","anurag");

## MOBILE APPLICATION DEVELOPMENT NOTES

---

```
Statement st=cn.createStatement();
ResultSet rs=st.executeQuery(sql);
if(rs.next())
{
    out.println("ok");
    out.close();
}
else
{
    out.println("0");
out.close();
}
}

catch(Exception ex)
{
    out.println(ex.toString());
    out.close();
}
```

## MOBILE APPLICATION DEVELOPMENT NOTES

---

```
out.close();  
  
%>
