**Course Overview:-**

It is hard to imagine a world without the Inte-net. Networking has made the sharing of information much faster than it was before. We get emails and instant messages with pictures attached instead of waiting days for postal delivery. We register \on-line" for classes instead of waiting \in line" to pull computer cards. We buy worldwide from eBay or locally from Craig's List instead of visiting our local bricks-and-mortar store.

People want to be connected. The world needs workers with technical skills. This course is focused on those skills: creating wiring, connecting computers, and making networks. This course will prepare you to understand, set up, and operate your own home network, or small business, or Internet Cafe. You will understand the fundamentals of networking and what things are necessary for success with those activities.

Building on that foundation, this course will prepare you to take other courses in the IT major. IT 426 Computer Network Servers and IT 480 Computer Network Design build on your knowledge from IT 280. In IT 426 you can develop skill and experience conjuring and operating network servers. In IT 480 you can develop skill and experience conjuring networking equipment such as switches and routers.
### Syllabus

## METALLIC CABLE TRANSMISSION MEDIA

- Metallic Transmission Lines, Transverse Electromagnetic Waves
- Characteristics of Electromagnetic Waves
- Transmission Line Classifications
- Metallic Transmission Line Types
- Metallic Transmission Line Equivalent Circuit
- Wave Propagation on Metallic Transmission Lines
- Metallic Transmission Line Losses
- Advantages of Optical Fiber Cables, Disadvantages of Optical Fiber Cables
- Electromagnetic spectrum, Optical Fiber Communications System Block Diagram
- Optical Fiber construction, The Physics of Light, Velocity of Propagation
- Propagation of Light Through an Optical fiber Cable

---

## Pulse Modulation, Pulse code Modulation

- Dynamic Range
- Signal Voltage –to- Quantization Noise Voltage Ration
- Linear Versus Nonlinear PCM Codes
- Companding
- PCM Line Speed
- Delta Modulation PCM
- Differential PCM
- Time- Division Multiplexing, T1 Digital Carrier System, North American Digital Multiplexing Hierarchy
- T Carrier systems, European Time- Division Multiplexing, Statistical Time – Division Multiplexing
- Frame Synchronization
- Wavelength- Division Multiplexing
### IV
- Electromagnetic Polarization
- Rays and Wave fronts
- Electromagnetic Radiation
- Spherical Wave front and the Inverse Square Law
- Wave Attenuation and Absorption
- Optical Properties of Radio Waves
- Terrestrial Propagation of Electromagnetic Waves
- Skip Distance, Free-Space Path Loss
- Microwave Communications Systems

### V
- The Subscriber Loop, Standard Telephone Set, Basic Telephone Call Procedures
- Call Progress Tones and Signals
- Cordless Telephones
- Caller ID
- Electronic Telephones
- Paging systems
- The Local Subscriber Loop
- Telephone Message-Channel Noise and Noise Weighting

### VI
- Units of Powerd Measurement, Transmission Parameters and Private-Line Circuits
- Voice-Frequency Circuit Arrangements, Crosstalk
- First-Generation Analog Cellular Telephone

OBJECTIVE QUESTIONS:
1. If the Nyquist's rate of a signal x(t) is fo, the Nyquists rate of its integral is \( f_0 \)
2. In 8-PSK system, adjacent phasors differ by an angle given by (in degrees) \( \pi/4 \)
3. Band Width efficiency of a Digital Modulation Method is \( (\text{Transmission Bit rate})/(\text{Minimum Band width}) \)
4. The minimum band width required to multiplex 12 different message signals each of band width 10 KHz is \( 120 \text{KHz} \)
5. The minimum band width required for a BPSK signal is equal to \text{bit rate} \)
6. The Auto-correlation function of White Noise is \text{Impulse function} \)
7. BPSK and QPSK systems are of same bit error probability
8. The phase angles of the possible outcomes of an 8-PSK system are obtained as \( (2m+1)\pi/8 \) where 'm' is an integer

DESCRIPTIVE QUESTIONS:
1. List out standard organizations
2. serial and parallel data transmission
3. Describe the following network topologies
   i) bus ii) star iii) mesh

ASSIGNMENT QUESTIONS:
1. a. Define protocol. Distinguish between connection oriented and connection less protocol.
   b. Describe the following network topologies
      i) bus ii) star iii) mesh
2. Explain the following terms
   i) protocol
   ii) peer to peer
   iii) serial and parallel data transmission
   iv) encapsulation and decapsulation
3. a) Describe OSI layered network.
   b) Describe network components, functions and features.
4) List out standard organizations.
5) Explain signal analysis.
6) I) Write short notes on signal to noise ratio.
      II) Write about analog modulation.
      III) Write about Digital modulation

**OBJECTIVE QUESTIONS:**
1. Frequency spectrum is divided into ______ categories: Infrared, visible, Ultraviolet
2. Wavelength = Velocity of light / frequency
3. Energy of photon = Planck’s constant * Frequency of light
4. Optical power = Instantaneous charge / Instantaneous change in time
5. Refractive index is: Amount of bending that occur at the interface of two materials with different densities
6. Lasers are: Gas, Liquid, Solid, Semiconductor
7. Characteristics of electromagnetic waves: wave velocity, frequency, wavelength
8. Twisted pairs are: Shielded and unshielded

**DESCRIPTIVE QUESTIONS:**
1. Write about advantages and disadvantages of optical fiber cable
2. Explain about light sources and light detectors
3. Explain about transmission line classifications and characteristics of electromagnetic wave

**ASSIGNMENT QUESTIONS:**
1) Explain about metallic transmission line losses.
2) Explain about transmission line classifications and characteristics of electromagnetic wave.
3) Discuss about transverse electromagnetic waves.
4) Explain in detail about
   i) Coaxial and
   ii) Twisted pair.
5) Write about advantages and disadvantages of optical fiber cable.
6) Explain about velocity of propagation
7) a) Write about optical fiber modes and classification and
       b) Losses in optical fiber cables.
8) Explain about light sources and light detectors.
9) Explain about lasers.

**OBJECTIVE QUESTIONS:**
1. Companding results in **Uniform S/N ratio through out the base band signal**
2. A uniform quantizer is having a step size of .05 volts. This quantizer suffers from a maximum quantization error of **0.025 V**
3. In the output of a Delta Modulation speech encoder, the consecutive pulses are of opposite polarity during the time interval t=2 sec to t= 4 sec .This indicates that, during this interval **i/p to the modulator is essentially a constant**
4. 5. Under equal band width requirement , **sampling rate in Delta Modulation is more than that of PCM**
5. Which of the following signaling schemes is a differential coding scheme? **NRZ-I**
6. Granular Noise in Delta Modulation system can be reduced by **decreasing the step size**
7. quantization error is independent of **sampling rate**
8. The advantage of DPCM over Delta Modulation is **quantization noise power is less**

**DESCRIPTIVE QUESTIONS :**
1. Discuss about Pulse code modulation?
2. Short notes on
   i) Signal voltage to Quantization noise voltage ratio?
   ii) Dynamic range?
3. Discuss about
   i) Time division multiplexing
   ii) Frequency division multiplexing

**ASSIGNMENT QUESTIONS:**
1. Discuss about Pulse code modulation?
2. What is companding and discuss its methods?
3. Short notes on
   i) Signal voltage to Quantization noise voltage ratio?
   ii) Dynamic range?
4. Explain about T1 Digital carrier system?
5. Discuss about
   i) Time division multiplexing
ii) Frequency division multiplexing
6. Explain about Digital line encoding?

**OBJECTIVE QUESTIONS :**

1. Electromagnetic waves consists: Electric and magnetic fields
2. Ray is a line
3. Power density is: \( \text{rms electric field intensity}/ \text{rms magnetic field intensity} \)
4. Loss of energy is: **Attenuation**
5. Optical properties: Refraction, reflection, Diffraction, Interference
6. Microwave frequency range: **500MHz to 300GHz**
7. **TDM**: time division multiplexing

**DESCRIPTIVE QUESTIONS:**
1. Explain the following terms
   i) Electromagnetic polarization
   ii) Wave attenuation and absorption.

2. Compare three modes of propagating electro magnetic waves

**ASSIGNMENT QUESTIONS:**
1. a. What is spherical wave front? Explain.
   b. Explain the operation of microwave radio link transmitter and receiver with the help of block diagram.
   b. Give geosynchronous orbit requirements.
2) a. Discuss optical properties of radio waves.
   b. Explain satellite orbits and orbital.
3) a. what is skip distance. Explain.
   b. What are the advantages of microwave radio communication?
   c. What is free space path loss?
4) Explain the following terms
   i) Electromagnetic polarization
   ii) Wave attenuation and absorption.
   b. Compare three modes of propagating electro magnetic waves

**OBJECTIVE QUESTIONS:**

1. Cordless phones occupied_______ frequency: **narrow band**
2. When was the first telephone was manufactured: 1920
3. PSTN refers: **Public switched telephone network.**
4. Which type of keypad used in 2500 type telephone: **Touch-tone keypad**
5. Which type of plugs used in telephone cable - **RJ-11**
6. RJ Stands for: **Registered jacks**
7. How many conductors used in the RJ-11: **six**
8. Switching systems outputs ____ voltage: -48vdc
9. The ringer circuit is originally_____: **electromagnetic bell**
10. The STDP is circuit: **On/off hook**
11. Resistors and capacitors are known as ____ : **equalizers**
12. Speaker converts electric signal into_____: **acoustic signal**
13. Dialing circuit contain_____: **touch tone keypad**
14. Ring back tone frequency: **440hz to 480hz**
15. What is the frequency combinations of key 8 in DTMF: **852hz, 1336hz**
DESCRIPTIVE QUESTIONS:
1. Explain Basic Telephone call procedure?
2. List and explain transmission parameters?
3. Discuss about units of power measurements?

ASSIGNMENT QUESTIONS:
1. Explain local subscriber loop?
2. Explain Basic Telephone call procedure?
3. Write short notes on
   i) Cordless phones    ii) caller id
4. List and explain transmission parameters?
5. Discuss about units of power measurements?
6. Explain standard telephone set?

</table>

OBJECTIVE QUESTIONS:
1. Non linear crosstalk is a direct result of: non linear
amplification
2. Nature of cross talk is described in: intelligible
3. Signals propagatr in four wire circuit is: E-W direction
4. Cellular telephone operates in: frequency modulation
5. Expand FCC: federal communication commission
6. Bell telephone introduce_____ : AMPS
7. AMPS use a technique: frequency division multiflexing
8. The mobile unit transmit carrier frequency uses:128 channels
9. Transmit carrier frequency f1 for (866hz):0.03N+825
10. Transmit carrier frequency f1__:0.03(N-1023)+825
11. Mobile identification has how many bits:34 bits
12. Mobile identification has _____bits area code :3
13. SID is :15 bit binary code
14. GSMA-Global System for mobile communication

DESCRIPTIVE QUESTIONS:
1. Explain about personal communication system?
2. Discuss about GSM?
3. Write about N-AMPS?

ASSIGNMENT QUESTIONS:
1. Explain about personal communication system?
2. Discuss about GSM?
3. Write about N-AMPS?
4. Explain personal satellite communication system and what are its advantages?
5. Discuss about interim standard 95?

UNIT-VII
DATA COMMUNICATIONS CODES, ERROR CONTROL, AND DATA FORMATS:
DATA COMMUNICATIONS EQUIPMENT:

LECTURE PLAN:
Total No. of Classes: 05
<table>
<thead>
<tr>
<th>S.No</th>
<th>Name of the Topic</th>

<td>1</td>
</tr>
</tbody>
</table>

**OBJECTIVE QUESTIONS :**

1. Error Control includes: Both error detection and error Correction
2. Error correction is accomplished with: Automatic repeat request [ARQ ]
3. Automatic request repeat sometime called as: Automatic request for retransmission
4. The Morse code was introduced by Samuel F.B Morse.
5. When was the first mode code is used: 1844
6. After establishment of Morse code the world’s first digital communications link between Washington,D.C., and Baltimore Maryland [Gantasala]using the telephone system.
7. The international Morse code for SOS(save our sip) is: . . _ _ _...
8. The Morse for fraction bar is: . . _ _ _
9. The Baudot code is also called as: Telex code.
10. Which of the following are the Baudot code’s special control functions Figure shift and letter shift.
11. RTTY stands for Radio teletype.
12. USASCII stands for: United States of American Standard
DESCRIPTIVE QUESTIONS:
1. Write short notes on
   i) Error Detection  ii) Error correction
2. Asynchronous Voice band modems?
3. List and explain data communication character codes?

ASSIGNMENT QUESTIONS:
1. List and explain data communication character codes?
2. Explain about Bar codes?
3. Write short notes on
   i) Error Detection  ii) Error correction
4. Discuss about character synchronization?
5. Explain about Voice-Band data communication modems/
6. Discuss about
   i) Asynchronous Voice band modems?
   ii) Synchronous Voice band modems?

UNITVIII:
DATA –LINK PROTOCOLS:

LECTURE PLAN:
Total No of Classes: 04

</tbody>
</table>
OBJECTIVE QUESTIONS:
1. Which of these following is character oriented protocol: KERMIT
2. The more efficient protocol is: Bit Oriented protocol
3. SDLC stands for: Synchronous data-link communications.
4. HDLC stands for: High-level data-link Communications.
5. When an operator is not typing, the terminal is in: idle state
6. The non data characters are: Bell(BEL), CR(carriage return), LF (line feed)
7. The assortment of characters transmitted as a group is called as: block or frame of data
8. In a polling environment the which mode of transmission is more appropriate for multi drop data communications circuits: Operating: Block mode
9. The first file transfer protocol is designed by: Ward Christiansen
10. In which year the first file transfer protocol is designed: In 1979
11. Christiansen’s protocol is now called as: XMODEM
12. XMODEM is designed for to use: between two PCs (or) between One PC and a main frame or host computer
13. The frame format of XMODEM consists of: four fields
14. Character oriented protocols sometimes called as: Byte-oriented protocols

DESCRIPTIVE QUESTIONS:
1. Short notes on
   i) Asynchronous Data-link protocols
   ii) Synchronous Data-link protocols
2. Discuss about High-level Data-link control?

ASSIGNMENT QUESTIONS:
1. Discuss character and bit oriented protocols?
2. Short notes on
   i) Asynchronous Data-link protocols
   ii) Synchronous Data-link protocols
3. Explain about synchronous Data-link control?
4. Discuss about High-level Data-link control?
5. Explain data link functions?

**Data Communication System (DCS):-**

Total no of theory classes : 10
Total no of practical classes : 06
Total no of classes : 16
Internal Theory exams:-

J. B.Institute of Engineering & Technology
II B.tech -2012-Batch/I SEM (I-MID DESCRIPTIVE)
BRANCH: INFORMATION TECHNOLOGY
SUB: Data Communication Systems

TIME: 60 MINUTES        Marks: 10

SECTION-A

Answer any TWO of the following: (2x5=20M)
1. xxxxxxxxxxxxxxxx
   a) xxxxxxxxxxxxx
   b) xxxxxxxxxxxx
   c) xxxxxxxxxxxxxxxxxx
2. xxxxxxxxxxxxxxxxxx
   a) xxxxxxxxxxxxxxxx
   b) xxxxxxxxxxxxxxxx
   c) xxxxxxxxxxxxxxxx
3. xxxxxxxxxxxxxxxxxxxxx?
4. xxxxxxxxxxxxxxxxxx? xxxxx?

J. B.Institute of Engineering & Technology
IIB.Tech -2012-Batch/I SEM (II-MID DESCRIPTIVE)
BRANCH: INFORMATION TECHNOLOGY
SUB: Data Communication Systems

TIME: 60 MINUTES        Marks: 10

SECTION-A
Answer any TWO of the following: (2x5=10M)

1. xxxxxxxxxxxxxxxx
   a) xxxxxxxxxxxx
   b) xxxxxxxxxxx
   c) xxxxxxxxxxxxxxxxxxxxx

2. xxxxxxxxxxxxxxxxxxxxx
   a) xxxxxxxxxxxxxxxxxxxxx
   b) xxxxxxxxxxxxxxxxxx
   c) xxxxxxxxxxxxxxxx

3. xxxxxxxxxxxxxxxxxxxxxxxx?

4. xxxxxxxxxxxxxxxxx? xxxxx?

Marks for the Internal Theory exams:-
