About JBIET

To be spiritually conscious, socially responsible and morally upright is the core dimension of JB Education Society. We know that success is not the destination, but a journey believing in the philosophy that victory belongs to the most preserving, while thanking the Almighty for those countless blessings. JBIET is an Autonomous Institution of the J.B. Group and is now striving to be a centre for Outcome Based education.

OVERVIEW

Cloud Computing provides us means of accessing the applications as utilities over the Internet. It allows us to create, configure, and customize the applications online.

The term Cloud refers to a Network or Internet. In other words, we can say that Cloud is something, which is present at remote location. Cloud can provide services over public and private networks, i.e., WAN, LAN or VPN.

Applications such as e-mail, web conferencing, customer relationship management (CRM) execute on cloud.

Cloud Computing refers to manipulating, configuring, and accessing the hardware and software resources remotely. It offers online data storage, infrastructure, and application.

Workshop Highlights

- Capture the true value of cloud and AI for your Business
- Explore platform features that make Oracle Cloud Infrastructure ideal for all of today's cloud native and legacy workloads

2. OBJECTIVES OF THE EVENT

To address the Faculties about the following

- Cloud Computing provides us means of accessing the applications as utilities over the Internet. It allows us to create, configure, and customize the applications online.
- The term Cloud refers to a Network or Internet. In other words, we can say that Cloud is something, which is present at remote location. Cloud can provide services over public and private networks, i.e., WAN, LAN or VPN.
- Applications such as e-mail, web conferencing, customer relationship management (CRM) execute on cloud.
- Cloud Computing refers to manipulating, configuring, and accessing the hardware and software resources remotely. It offers online data storage, infrastructure, and application.

3. OUTCOME OF THE EVENT

On the completion of this seminar, Faculties will be able to understand

- Everything you need to build and scale
- Applications that run in a private cloud don't get the advantage of unlimited elasticity gained from public cloud services built on an enormous scale of infrastructure

4. EVENT BRIEF REPORT

The Speaker addressed the following things:

- One of the biggest challenges for IT teams is to keep up with modern and distributed application designs.
- As applications evolve, IT teams must adjust their monitoring strategies. Effective cloud monitoring is a complex task.
- The tools that an organization currently uses may no longer be the ones they need, as different types of applications will need to be monitored in different ways.

5. SUGGESTIONS FOR PROMOTING THIS TO FACULTIES / STAFF JBIET
