EVENT SUMMARY REPORT

A work shop was conducted by department of mechanical engineering on “**A value added course on AUTOCAD software**” by Mr.Venkataramana , Consulting Engineer, Space Engineering Academy for B.Tech Mechanical Engineering students from 09/10/2023 to 13/10/2023 , 50 students participated in the workshop.

Title of Event: “**A value added course on AUTOCAD software**”

The use of AutoCAD may also be relied on heavily in order to create efficiencies within the industries. We were guided by the fact that there is more to learning AutoCAD than drawing simple figures and lines. It has very vast application in the field of manufacturing, architecture, electrical, and many more. With the help of AutoCAD, designs very quickly made. It improves the quality of the drawing which we can't get by hand drafting. With the help of this software, drawing can be easily modified whenever wanted which reduces the human effort. We can easily transfer files from one place to another in no time which reduces the time. This software training provided practical designing to visualize as well as create prototypes of a product in reality and quick time. This workshop on AutoCAD software benefitted students by practical approach.
